

AMAN ADHAV

avadhav@asu.edu | 623-276-6989

github.com/amanadhav | linkedin.com/in/aman-adhav | amanadhav.com

AI Engineer | Agentic Systems and LLM Applications | 1st of 50 Teams, Amazon Kiro Challenge | Available Jan 2027

EDUCATION

Arizona State University

Bachelor of Science in Computer Science, GPA 3.83/4.0

Tempe, AZ

Expected Graduation: Dec 2026

Relevant Coursework: Applications of AI Engineering (CodePath AI201)

Certifications: AWS Certified AI Practitioner, AWS Certified Cloud Practitioner | AWS Developer Associate (in progress)

EXPERIENCE

ASU Enterprise Technology

Software Engineer (AI Focused), Integration & APIs Team

Scottsdale, AZ

Mar 2026 – Present

- Cut event-source onboarding 12x, from 4 hours to 20 minutes, by shipping a production LLM agent that orchestrates Jira, Terraform, and GitHub PRs end to end.
- Caught 7 invalid configurations at terraform plan instead of in production by enforcing human approval gates on every agent write, PR, and deployment.
- Automated self-serve analysis of an 80,000+ record event archive by building an Athena agent with partition-aware queries, schema-stability sampling, and per-source access control.
- Consolidated 21 REST endpoints onto a central data platform with LLM agents that inventoried and classified SQL across four repositories and mapped the dependency graph to generate the OpenAPI 3.0 spec, under human review at each phase.

Arizona State University

Undergraduate Teaching Assistant, Linear Algebra & Calculus

Tempe, AZ

Aug 2024 – Mar 2026

- Taught the linear algebra underpinning modern ML (vector spaces, eigenvectors, matrix decomposition) across 3 semesters.

Rachita Infotech

Software Engineering Intern

Pune, India

May 2024 – Aug 2024

- Improved internal project-tracking workflows ~15% and raised Jest test coverage from ~60% to ~75% by building a full-stack React/Node/Express app with REST APIs over MongoDB.

PROJECTS

AllVoice, Amazon Kiro Challenge Winner | TypeScript, React, Chrome MV3

github.com/amanadhav/AllVoice

- Won Grand Prize and Best in Build (\$6,000, 1st of 50 ASU teams) by architecting a 6-stage voice-to-action agent that lets blind users navigate the web hands-free.
- Blocked unsafe actions pre-execution via a deterministic ethics gate enforcing 5 privacy rules as a pure function (103 tests); presented the agent architecture on Amazon Kiro's official developer livestream.

TraderAI, Grounded Two-Model Analysis Platform | Python, FastAPI, Claude API, React github.com/amanadhav/traderai

- Made hallucinated figures structurally impossible by forcing the analyst to answer through 11 typed tools, so every number it cites was fetched from a live source rather than recalled.
- Routed calibrated probability judgments to a fast typed model and narrative reasoning to Claude, capping daily spend in code and degrading to keyword classification when a key is absent.

Adversarial Coding Pipeline | Python, multi-agent, TDD

github.com/amanadhav/adversarial-coding-pipeline-demo

- Caught 2 P1 vulnerabilities a single-pass build missed by pitting Architect, TDD Coder, and adversarial Reviewer agents against a deterministic no-LLM safety gate.
- Found 6 P1 defects in TinyDB, including silent document destruction from key-coercion collapse and a duplicate-ID bypass enabling silent overwrite, reported with proofs of concept through the project's private security channel.

TECHNICAL SKILLS

AI & Agents: Claude API, OpenAI API, MCP, RAG, embeddings, vector search, prompt engineering, structured outputs, evals, guardrails, human-in-the-loop, fine-tuning, Hugging Face Transformers, sentence-transformers, Amazon Kiro, Gradio

Languages: Python, JavaScript, Java, SQL, Bash

Databases: PostgreSQL, Redis, DynamoDB, ChromaDB

Libraries & Frameworks: FastAPI, Flask, Node.js, React, Playwright, Pydantic, pytest, Vitest

Cloud Infrastructure & Deployment: AWS (Lambda, EventBridge, S3, Athena, ECS, RDS, IAM), Terraform, Docker, GitHub Actions, Datadog, Git, Linux
